

CARAVAN

Passenger Conversion: Airstair Kit

FAA / PMA Approved (STC SA00511AT)

This STC is applicable to the Cessna 208, 208A and 208B

Enhance Passengers' Entrance and Exit

Adding the Airstair Kit gives you a portable entry and exit door. It is located on the left side of the aircraft. This modification takes advantage of the existing cargo door structure and saves significant weight over other designs. Installation requires minimal effort, and involves modification of the aft cargo doorframe to include a support for the rear stair cable and installation of the portable stair assembly. Neither of these modifications have any negative effect on aircraft operations. The stairs pivot on an axis just above floor level and use a snubber for controlled deployment. When extended, twin cables support the stairs. The Airstair Kit can be used in the Atlantic Aero series of Caravan Passenger Conversions or retrofitted to an existing passenger Caravan.
